The C programming language is a general-purpose and high-level language that facilitates structured programming. C was later on chosen as a system development language because it generates code that executes almost as quickly as an assembly language code. It follows a top-down approach in solving a problem and supports modular programming, which allows developers to break down the code into smaller, reusable components.

The C programming language was created by Dennis Ritchie at Bell Labs in 1972 to allow utilities to run on Unix systems. Because C programs are fast, they allow programmers to manually control computer hardware.

C is a widely used programming language that has many advantages. One of the main advantages of C is its efficiency and speed. C is a low-level programming language that provides direct access to memory and hardware, making it ideal for developing system software and other applications that require high performance. C is also a portable language that can be compiled and executed on various operating systems, making it a popular choice for developing cross-platform applications.

One of the main disadvantages of C is its lack of memory management, which can lead to memory leaks and other memory-related issues if not handled properly. Additionally, C can be a difficult language to learn for beginners due to its low-level constructs and lack of built-in abstractions.

А) advantages of the C programming language
Б) features of the C programming language
В) disadvantages of the C programming language
Г) the history of the creation of the C programming language

35. *Установите правильную последовательность действий, чтобы получить инструкцию по теме "How to use Web Search".*

А) Use specific keywords and search operators: Enter specific keywords or phrases related to the information you're looking for. Be concise but descriptive, using terms that capture the essence of your question. Use search operators to narrow down your results. For example, use quotation marks to search for exact phrases ("online marketing") or use a minus sign to remove terms (marketing -online) to filter search results more effectively.

Б) Evaluate sources: After clicking on a link, evaluate the content of the website. Check the credentials of the author, the reliability of information, and whether other reputable sources support it. This will help ensure the accuracy and credibility of the data found.

В) Choose the Right Search Engine: Select a search engine (e.g., Yandex, Rambler) based on your needs. Different search engines may give different results, so you should choose the one that suits your needs best.

Г) Review results: Go through a list of search results. Read titles to see which links may contain the information you need. Pay attention to publication dates to be sure the information is up-to-date.

Правильный ответ: В, А, Г, Б
Компетенции: УК-4

36. *Установите правильную последовательность действий, чтобы получить инструкцию по теме "How to analyze data".*

А) Prepare data: Clean and arrange the data so that it is ready for analysis. Remove duplicates, handle missing values and format the data appropriately. This step is crucial to ensure accuracy of your analysis.

Б) Perform analysis: Carry out selected analyses using appropriate software such as Excel or SAS (Data Analysis System). Document the process as you analyze the data to keep track of your methods.

В) Interpret results: After analyzing data, interpret the findings in the context of your original questions or hypothesis. Summarise key insights and think about how they apply to the problem you're investigating. Communicate findings effectively through written reports or presentations.

Г) Choose analysis methods: Decide which analytical techniques and tools to use for analyzing the data. This might include statistical analysis, visualization, machine learning or qualitative methods depending on your objectives.

Д) Collect data: Gather relevant data from reliable sources. This may involve surveys, experiments or existing datasets. Ensure that the data is complete and adequate for the analysis that you plan to perform.
